

- * 100mm objective lenses
- * Multicoated
- * Metal construction
- * Contoured eye cups
- * Fast central focussing
- * Tough body
- * Flip filter system (on BCF)
- * Bak4 prisms
- * Comfortable, ultra bright viewing

We price the BCF as binocular only, however we suggest you use this model with a tripod.

Connection to any standard tripod is quick and easy via the central clamp which is adjustable to provide the correct balance.

We have a range of tripods available.

Optical Hardware BC / BCF 22x100 Binocular

The BC / BCF are high quality long range observation binoculars.

Powerful 22x magnification combined with massive 100mm objectives provides an incredibly bright image with BAK 4 prisms and full multicoating for ultra clear and colour corrected viewing.

The central focussing allows fast focussing on your subject and the shaped eyecups make the viewing system incredibly comfortable.

The BC or BCF is a great choice for astronomy, coastal observation, birdwatching and surveillance. Birdwatchers and particularly sea watchers requiring high magnification, speed of focussing combined with high resolution images.

**The BC and BCF models are essentially identical
Except that the BCF has a built 'switch-in' filter system**

The eye viewing system of the BCF incorporates an ingenious flip-in filter system reducing brightness and glare making this binocular a great choice for astronomy or viewing in bright conditions

The binocular is supplied with a neck strap, however we would suggest that this model is best used on a tripod or perhaps a strong monopod.

We would suggest the Olivon TR154 or 158 tripod and full details can be found on our Olivon price list.

Guide retail price including VAT
