ultra light weight tripod combination
The ultimate carry-to-hide instrument**

Optical Hardware Hide-lite telescope and tripod

The Hide-lite is a high quality and very rugged compact telescope combined with an ultra light weight tripod.

High resolution prism and full multicoating for ultra clear and colour corrected viewing. Focussing is fast and positive, a 45 degree eyepiece makes the viewing system incredibly comfortable. The Hide-lite telescope is fully waterproof with a nitrogen filled body. In extremes of temperature and wet conditions the optic system will not fog, making rapid use possible.

The eyepiece features a zoom from 18x to 36x - we suggest use at around 25x for birdwatching, however, the ability to zoom up to 36x is great for viewing details.

The Hide-lite tripod can be used as a table top, or extended to around 120cm, ideal for use while seated.

[Even if you already have an expensive telescope this is a must have item - carry it with you and never miss a spotting opportunity.](#)

for both the scope and tripod**

Uses

Birdwatching and general observation where ruggedness of construction and waterproofing is essential in a compact design.

Always carry it with you

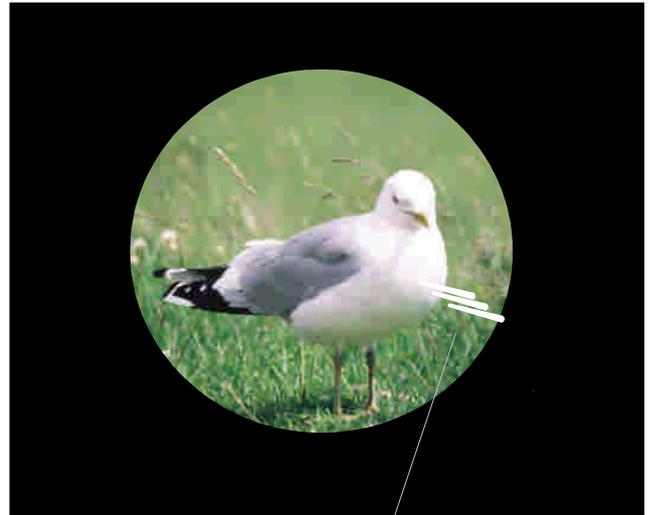

Contour Eyecup

for telescopes

The contour eyecup fits inside the existing eyecup,

Fits Hide-lite, Visionary 60 / 70 series and many other scopes

Flare on the image is often caused by light reflecting on the eyepiece from behind – and sometimes its not so comfortable to push your eye right up to the eyepiece to prevent this. The contour eyepiece is a quick and easy solution.

Guide retail price £ 7.99
